

Cloud Computing Applications and Services

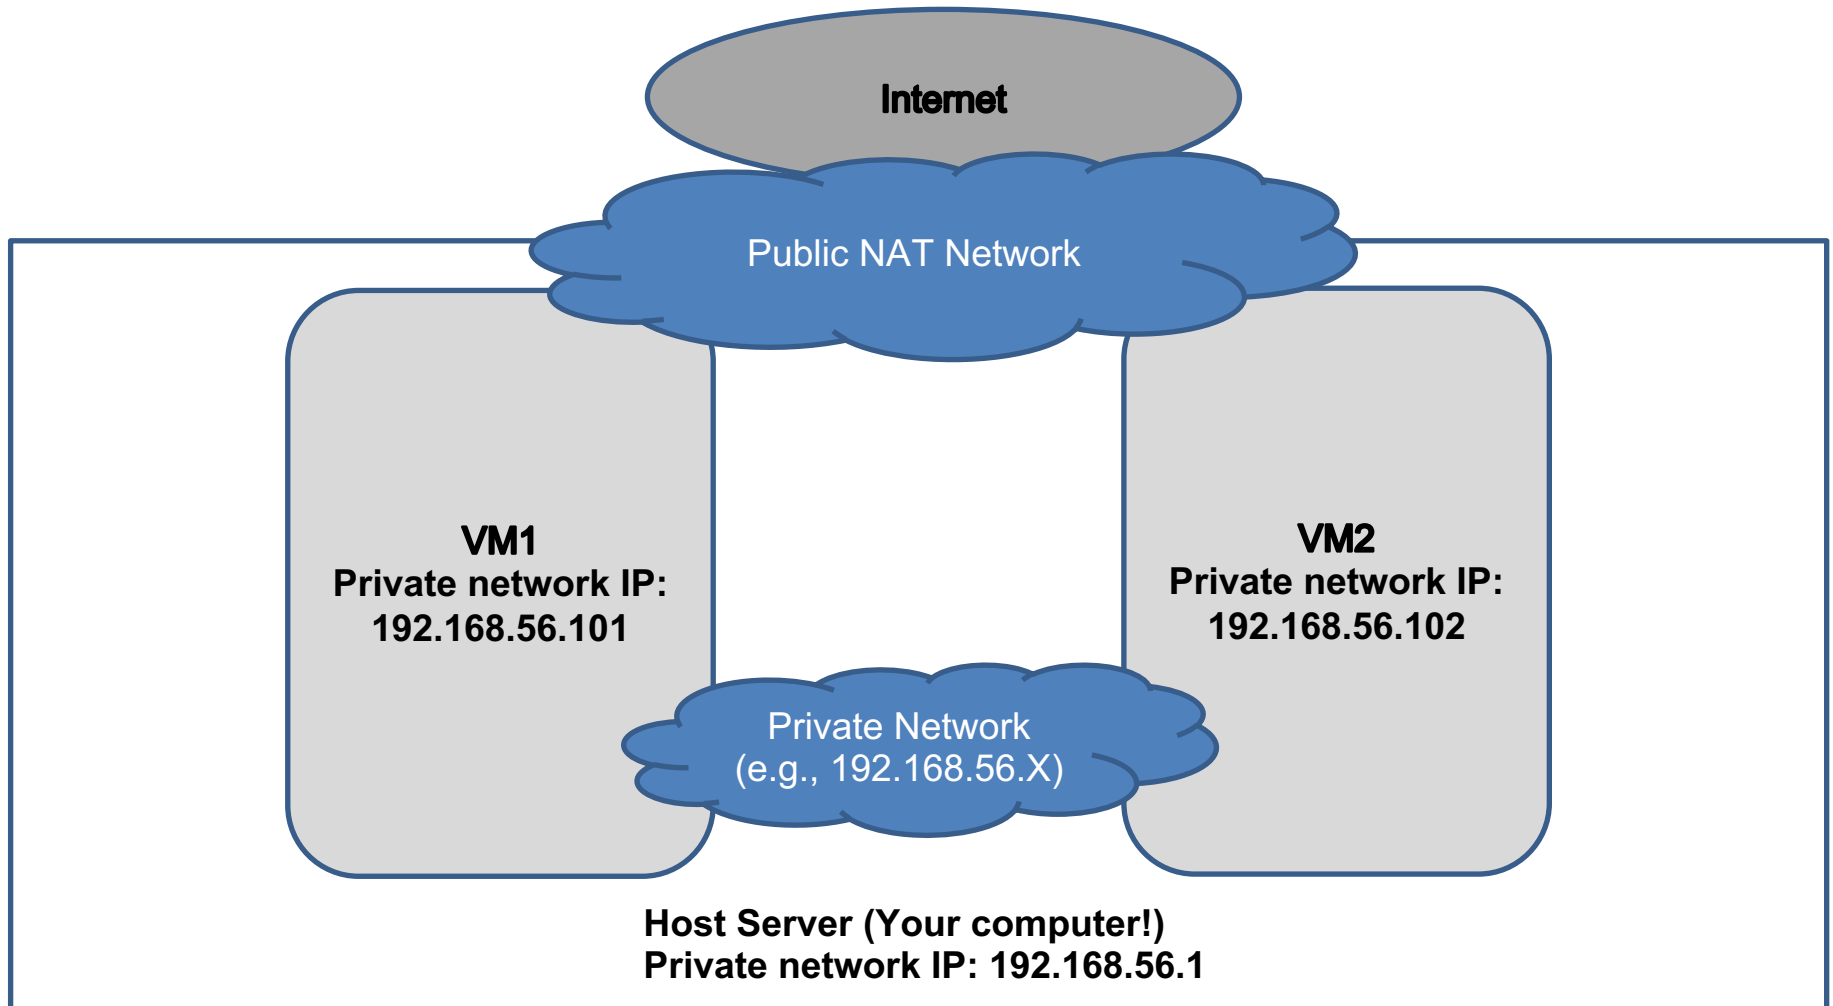

(Aplicações e Serviços de Computação em Nuvem)

Warm-up

University of Minho
2022/2023

Goal

Private Network (aka Host-only) – Only the host and VMs can communicate with each other
Public NAT network – VMs access the internet through (masked as) the Host IP

Troubleshooting

Private Adapter - VirtualBox

- Configure a private network adapter at the host
 - File -> Host Network Manager (Mac OSX)
 - **Reuse** or **create** a new host adapter

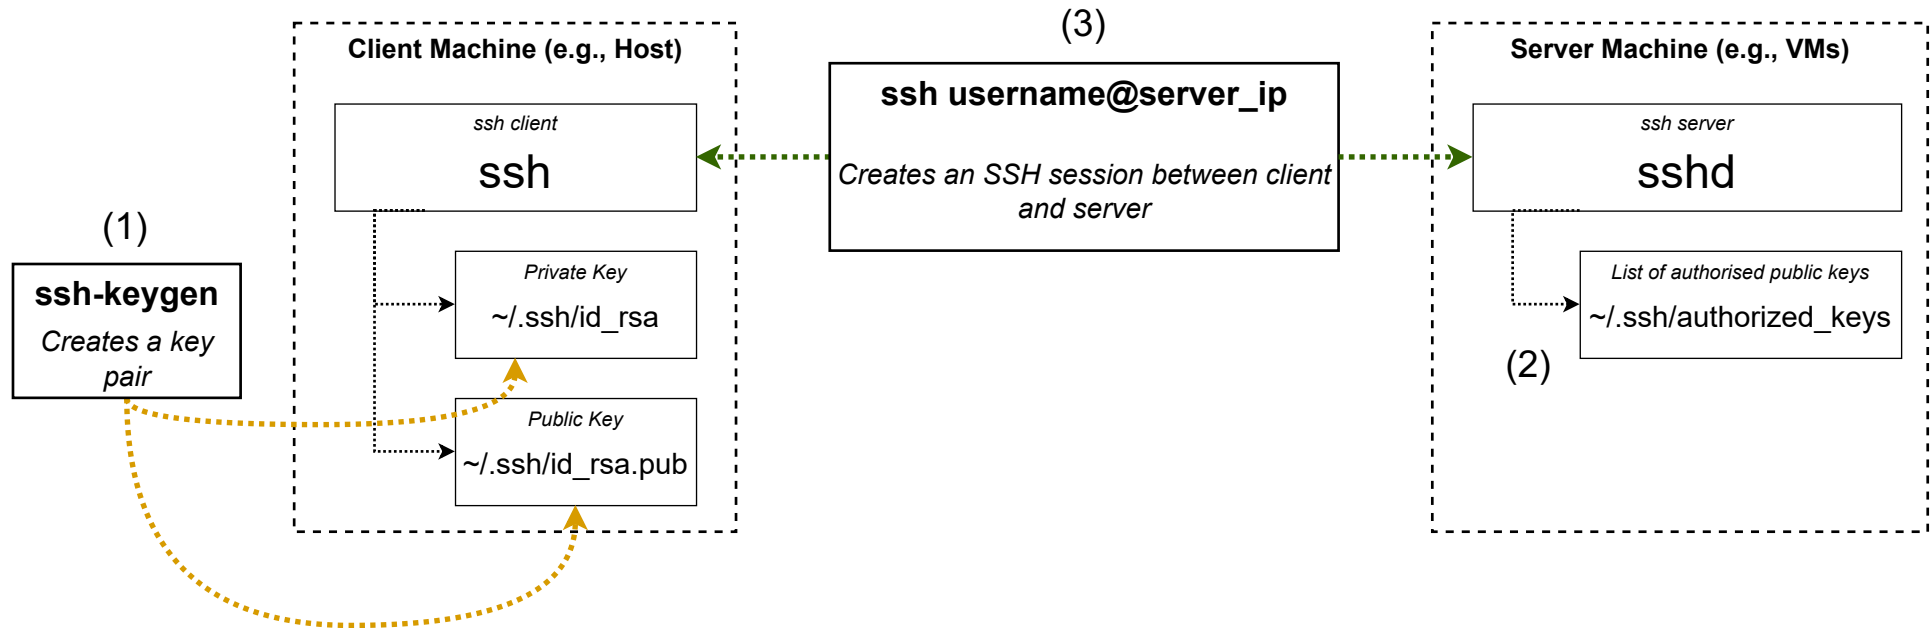

Adapter Configuration (example)

[illegible]

Adapter Configuration (example)

[illegible]

SSH

Note: Step (1) needs to be done manually. Step (2) is specified at the Vagrantfile.

Example: For accessing VM1 one should run **ssh vagrant@192.168.56.101** at the host's terminal
